Before last Purim further deteriorated condition, when he developed respiratory failure. He has been hospitalized since a very difficult situation when doctors sealed that without an urgent lung transplant, it .will not survive beyond a few days

All his life Benji made all for giving to others," says Josh, "He did not stop to worry about others and" was involved in a lot of charity. This was the motto of his life, and he believed that he should make the best of what you have. We hope that families Flounder, will one great commandment for him, and give ".Benjie a chance to survive

Benji hospital. "We hope that the families of indecision, do one great (commandment for him, and give Benjie a chance of life" (Courtesy of the family

Debra wife does not leave her husband for a moment and taking care of him from his sickbed, begins her impassioned plea: "nothing left to live for a long time, give it a chance, and if you're undecided - did the "commandment, and signed the card Ad"i rescue

Fail to live up to the fifth decade of life

Over 600 Israelis CF patients ", an inherited disease that causes changes in the pancreas and health generated by occluding proximity provisions, recurring infections and persistent damage to these organs followed

External provision glands produce in healthy people sparse and slippery secretions, including sweat, mucus, tears, saliva and digestive juices. The provisions play an important role in maintaining normal body functions. In patients with cystic fibrosis glands produce secretions external provision thick and sticky that adversely affect vital functions such as breathing and digestion

Chief Rabbi Lau calls lung donation Benjie

Usually admitted to hospital once a year for many in isolated rooms in hospitals, due to resistant bacteria which are infected risking their lives. They are connected to the oxygen around the clock, taking dozens of medications, antibiotics, inhalations and others suffering from the destruction of the pancreas also have diabetes and are required to balance their blood glucose using insulin injections

Over the years, going to the hospital and their condition deteriorates. Until a few years ago, life expectancy of patients has not passed the age of 28. Thanks to new treatments for some patients currently fail even to reach the fifth decade of life. But the only way to heal is through a transplant
